## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/1/2009 has been entered.

### ***Response to Arguments***

Applicant's arguments see amendment, filed 7/1/2009, with respect to claims 1-16 have been fully considered and are persuasive. The rejections of claims 1-16 have been withdrawn.

### ***Allowable Subject Matter***

Claims 1-16 are allowed.

The following is an examiner's statement of reasons for allowance: Claim 1 teaches a cell culture insert comprising a beaker-shaped insert wall having a membrane filter bottom, a top, and projecting support arms that are distributed around the circumference of the top and having lateral spacers for a vertical and horizontal orientation in a well with a liquid culture medium in a cell culture plate, characterized in that the spacers are distributed around the circumference of the cell culture insert and have different lengths to the insert wall including a shortest spacer, in such a way that one large feed window and multiple smaller windows are created when the insert is in rest position in the well; wherein the shortest spacer has a knob shape.

The closest prior art is represented by Matsui et al. who teaches a culture cell having discontinuous projecting parts for hanging the culture cell on a circumferential portion and a membrane filter on a bottom portion. Furthermore, Matsui also discloses wherein triangular tapered ribs (spacer) are provided underneath the discontinuous projecting parts. However, the triangular ribs are of uniform size and do not provide a knob shape and therefore teaches away from the applicants claimed invention which teaches that the spacers have different lengths and wherein the shortest spacer has a knob shape. Claims 2-15 depend on these distinctive features.

Claim 16 teaches a cell culture insert comprising a beaker-shaped insert wall having a top, a membrane filter bottom and projecting support arms distributed around the circumference of the top of the insert, and having lateral spacers for vertical and horizontal orientation of the cell culture insert in a well containing a liquid culture medium in a cell culture plate, wherein lateral spacer is knob shaped; wherein at least one of said projecting support arms is shorter than at least one other of said projecting support arms, whereby the cell culture insert in rest position is eccentrically suspended in the well by the support arms so that one large feed window and a plurality of smaller windows are created.

The closest prior art is represented by Matsui et al. who teaches a culture cell having discontinuous projecting parts for hanging the culture cell on a circumferential portion and a membrane filter on a bottom portion. Furthermore, Matsui also discloses wherein triangular tapered ribs (lateral spacer) are provided underneath the discontinuous projecting parts. However, the discontinuous projecting parts (projecting support arms) and triangular tapered ribs are of uniform size and furthermore the triangular tapered ribs do not provide a knob shape and therefore teaches away from the applicants claimed invention which teaches that the at least one of said projecting support arms is shorter than at least one other of said projecting support arms and wherein the lateral spacer has a knob shape.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
